

JOB DESCRIPTION: CONCRETE FORM SETTER

Overview

This specialized carpenter builds and sets up forms made of wood, metal, vinyl or other material in the plant according to customer specifications (plans). They may use a transit and/or a measuring tape to square up forms. A string line may be used as a guide for setting forms and leveling forms or a laser level maybe used for the same purpose. The concrete form builder/setter will also have to brace forms to the concrete floor, as well as brace the internal core walls. The bracing prevents the concrete form work from wandering or moving when pouring concrete. Larger forms may be secured with bolts, metal brackets or other types of bracing. Reinforcing rebar or wire mesh is needed in every structure, the form builder will asset in placing it as required. A hand saw or table saw is used to modify any wood forms where needed.
